PROFESSIONAL SUMMARY

Full-Stack Developer with 3+ years of experience designing, developing, and maintaining enterprise web applications using C#, .NET/.NET Core, Angular, TypeScript, REST APIs, and SQL Server. Strong background in backend development, business logic, database-driven applications, and system integrations.

Experienced developing configurable software products for multiple customers, implementing customer-specific business rules and functionality while maintaining a shared application core. Hands-on experience with WMS, inventory and logistics systems, warehouse automation, production support, and integrations with external systems and devices.

Strong problem-solving and debugging skills, with experience working across backend, frontend, database, and integration layers. Comfortable collaborating with technical and non-technical stakeholders, analyzing requirements, and learning new technologies and architectures.

EXPERIENCE

String Sistemas

Buenos Aires, Argentina

Full-Stack WMS Application Developer

Jan 2024 – Sep 2025

- Developed and maintained enterprise Warehouse Management System (WMS) applications using **C#, .NET/.NET Core, Angular, TypeScript, REST APIs, and SQL Server**.
- Managed and maintained **9 WMS projects simultaneously** across different Angular and .NET versions, ensuring application stability, compatibility, and reliable operation across customer environments.
- Led end-to-end development from requirements analysis and data modeling in **Erwin Data Modeler** through backend development, database implementation, frontend development, deployment, and user training.
- Developed a configurable WMS product for multiple customers, implementing customer-specific parameters, business rules, and functionality while maintaining a shared application core.
- Designed and implemented backend business logic and database operations supporting inventory, orders, picking, and warehouse processes.
- Developed and optimized **SQL Server queries and T-SQL operations** for business-critical warehouse workflows.
- Built **ionic mobile applications for Zebra handheld devices**, integrating mobile workflows with the WMS platform and warehouse operations.
- Integrated **Pick-to-Light (PTL) systems, ZPL label printing, and robotic sorter automation** with software-driven warehouse workflows.
- Developed an internal **BI framework** that enabled administrative users to create custom dashboards and reports, reducing reliance on IT support.
- Provided advanced production support and real-time troubleshooting, diagnosing issues across application, database, integration, and infrastructure layers to minimize disruption to warehouse operations.
- Collaborated with developers, users, and business stakeholders to analyze requirements, investigate issues, and deliver improvements to production systems.
- Used **Git and Azure DevOps** throughout the development and delivery workflow.

Concrete Quality

Madrid, Spain

Full-Stack Concrete Analysis Application Developer

Jan 2022 – Aug 2023

- Designed, developed, and maintained a business application used across production plants and construction sites to monitor concrete performance from production through delivery.
- Developed configurable workflows and customer-specific functionality while maintaining a common application architecture.
- Implemented complex mathematical and chemical calculations for cement tests, specimens, and quality assurance processes.
- Developed backend business logic and database-driven functionality supporting laboratory, production, and quality-control workflows.
- Automated Excel and PDF report generation, reducing manual reporting time by approximately 40% while supporting personalized outputs for different users.
- Developed responsive and mobile-compatible functionality using Cordova, enabling access to application workflows across different devices.
- Worked directly with end-users to analyze requirements and improve scheduling, task-management, and operational workflows.
- Investigated and resolved application issues, ensuring reliable operation for users across different production environments.

TECHNICAL SKILLS

Backend: C# • .NET Framework • .NET Core • .NET 6+ • ASP.NET • Entity Framework • REST APIs • Object-Oriented Programming

Databases: SQL Server • T-SQL • Database Design • Query Optimization • Erwin Data Modeler

Frontend: Angular (v5–20) • TypeScript • JavaScript • HTML • CSS/SCSS • NgRx • Ionic

DevOps & Tools: Git • Azure DevOps • Azure • Visual Studio • VS Code • Postman

Systems & Integrations: WMS • REST Integrations • Pick-to-Light Systems • Robotic Sorter Automation • Zebra Devices • ZPL Printing

Engineering Practices: Agile Development • Requirements Analysis • Debugging • Production Support • Configurable Business Logic • Technical Troubleshooting

Domain: Warehouse Management • Inventory Management • Picking • Logistics • Business Process Automation

Languages: Spanish (Native) • English (Fluent)

PROFESSIONAL INTERESTS

Backend development and architecture, distributed systems, cloud technologies, system integrations, performance optimization, and exploring new technologies and development practices.
